WILLIAM MARSHALL

Denver, CO · Open to relocation · wsmarshall11@protonmail.com · linkedin.com/in/wsmarshall11 · wsmars11.github.io

Business Operations & Strategy · Program / Project Management · Manufacturing Operations

PROFILE

MBA who works where strategy, finance, and operations meet. A systems engineer of the business. A decade delivering complex physical and hardware product on non-recoverable schedules: staffing and sequencing crews, running make-or-buy material procurement, and then carrying hardware from development into production at DISH. I can provide hands-on manufacturing and project delivery with financial modeling (pro forma, NPV/IRR) and data analysis, moving fluently between the shop floor and leadership. High tolerance for ambiguity across tasks and departments.

EXPERIENCE

DISH Network — Denver, CO

Software Engineer — Hardware Device Delivery · Production & Field Support — *Nov 2021 – Present*

- Delivered an Android system application from the ground up for remote-control input on shipping set-top boxes and carried it through the transition from development into production, in lockstep with the hardware and firmware teams across recurring release cycles — a production-hardware feature owned end to end.
- Took over a high-volume hardware defect queue where tickets arrived mislabeled; built a root-cause triage process, tracked in Jira, queried in SQL, that traced each issue across software and hardware to its true source and tightened quality standards, cutting ~42% of misrouted tickets.
- Built floor tooling and reporting for the technicians who load and diagnose hardware. A faster flashing utility and a fleet-wide visual memory-leak tracker, removing manual steps from the production and diagnostic workflow for 250 engineers.
- Worked across engineering, firmware, and QA to keep device releases on schedule and defects contained before the field, serving as a translator between engineering detail and delivery commitments.

Blue Genie Art Industries — Austin, TX

Project Lead & Fabricator — Custom Industrial & Architectural Manufacturing — *2012 – 2018*

- Owned shop-to-site delivery of custom industrial and architectural builds for commercial and institutional clients — Johnson & Johnson, Spoetzl Brewery, The Catherine, Thinkery, running each job from intake and design through CNC, fabrication, finish, and on-site install.
- Held full operational control of each job: production planning, build sequencing, workforce allocation, material procurement (make-or-buy), and a fixed install date. One-off work with non-recoverable windows. A missed date could not be rerun so schedule and quality discipline were absolute, across typically $600 - $10k materials budgets and 3-6 concurrent jobs.
- Directly supervised crews of 5–7: created the shop's first fiberglass program for Johnson & Johnson Labs (Houston) across procurement, labor hours, fabrication, and a hard overnight install window; led a separate crew to reproduce a historic bank's tin rooftop ornament in fiberglass over foam and steel, integrating machinist-built armatures.
- Delivered precision architectural assemblies under tight tolerance: mahogany lobby screens on custom steel armature at luxury condos *The Catherine*, hung as one integrated system; an exterior tiled dragon on a custom GFRC base at Thinkery, coordinating a visiting mosaic tile crew through final install at museum entrance. EDUCATION

MBA, Leeds School of Business — University of Colorado Boulder — Jun 2024 – May 2026

Coursework: Operations Management, International Operations, Advanced Data Analytics, Corporate Finance, Managerial Economics, Financial Accounting, Applied Financial Management, IT & Business Strategy.

Capstone: Operating and financial plan for a drone-as-a-service insurance-claims venture: market sizing (~$2.4B), pro forma statements, and NPV/IRR analysis, structured as a build-and-run plan.

B.A. Computing, College of Engineering — Texas A&M University — Aug 2018 – Jul 2020

Member of the inaugural Computing class; self-designed interdisciplinary curriculum pairing computer science with human-performance coursework.

WHAT I BRING

Operations & Program Mgmt: production planning, build sequencing & scheduling, make-or-buy, material procurement, workforce allocation, vendor coordination, quality standards & crew/site safety, cross-functional program delivery.

Finance & Analysis: financial modeling (pro forma, NPV/IRR), budgeting & forecasting, cost-benefit justification, Excel, SQL, data analysis.

Tools & Hardware: Jira, Confluence, Excel, SQL; development-to-production transition, hardware & firmware coordination, diagnostic and deployment tooling.

Build: CNC, fiberglass / GFRC / polyurea, architectural wood and steel armatures, on-site assembly and finish.
