SUMMARY

Software engineer with 4 years of experience at DISH Network and an MBA from the Leeds School of Business at CU Boulder, now targeting a finance role where analytical precision and technical fluency create real edge. Experienced building data systems from the ground up. Equally comfortable in the model and in the pipeline feeding it. Authored a full business plan and financial analysis for a drone-services startup as part of MBA capstone, including pro forma statements, NPV/IRR modeling, and market sizing in a \$2.4B industry.

EXPERIENCE

Software Engineer

DISH Network · November 2021 – Present

- Built DevOps tooling to accelerate software deployment to set-top box fleets and developed a visual memory-leak tracker used to identify and triage hardware defects across production devices.
- Moved to the Input Manager team, building an Android system app from scratch to handle remote-control input on Android-based set-top boxes, collaborating directly with hardware engineers through firmware update cycles.
- Served as first-line triage for all input-related issues; developed a systematic approach to tracing reported problems back to root cause rather than accepting surface-level blame assignment — a diagnostic discipline directly applicable to financial analysis.
- Worked across DevOps, systems programming, and cross-functional hardware coordination in a fast-moving production environment.

MBA CAPSTONE PROJECT

Drone as a Service (DaaS) for Insurance Claims — Founder & Analyst

Leeds School of Business, University of Colorado Boulder · Spring 2026

- Designed and analyzed a full business plan for a DaaS startup targeting the \$2.4B (15.5% CAGR) North American drone-based insurance survey market.
- Built a 3-year pro forma income statement projecting revenue growth from \$225K (Year 1) to \$562.5K (Year 3) at 60% gross margins; modeled breakeven in Year 1 at 30 subscribers.
- Conducted capital budgeting analysis: \$90K initial investment, NPV of +\$87,826 at 15% discount rate, ~54% IRR, and mid-Year 2 payback period.
- Applied PESTEL, Porter's Five Forces, VRIO, SWOT, STP, and Delta Model frameworks across strategic, marketing, and operational dimensions.
- Identified an unoccupied competitive whitespace: no existing provider combines full-service outsourced operations with processing-speed guarantees for mid-tier insurers.

EDUCATION

Master of Business Administration (MBA)

Leeds School of Business, University of Colorado Boulder · June 2025 – May 2026

- Coursework: Financial Accounting, Corporate Finance, Applied Financial Management, Advanced Data Analytics, Managerial Economics, Strategy, Operations Management, IT & Business Strategy, Quantitative Methods I & II, Marketing Management, International Operations.

Bachelor of Arts in Computing

Texas A&M University, College of Engineering · [Graduation Year]

- Interdisciplinary program combining computer science with sports psychology and human motivation, focused on applying technology to health performance through wearables and human-computer interaction.

SKILLS & TOOLS

Financial Analysis	Financial modeling, pro forma statements, NPV/IRR, capital budgeting, variance analysis
Frameworks	PESTEL, Porter's Five Forces, SWOT, VRIO, STP, Delta Model, 3 C's, 4 P's
Technical	Python, Kotlin, SQL, Android SDK, Git, Linux/DevOps tooling
Software	Excel (financial modeling), Google Workspace, Jira, Android Studio
Business	Market sizing, go-to-market strategy, subscription pricing, B2B sales strategy

EARLIER EXPERIENCE

Fabrication Specialist

Blue Genie Art Industries · Prior to 2021

- Built custom metal and wood installations for commercial clients including Spoetzl Brewery (Shiner Bock), Ramen Tatsuya, the Thinkery children's museum (Austin), and J&J Labs (Houston).
- Managed project execution from design through installation; collaborated with architects, hardware teams, and on-site crews.
- Observed firsthand how a technically strong operation can fail without sound financial management — a direct motivation for pursuing finance.
